

GD CASE 1

The Situation:

Three days ago, a nuclear war broke out around the world with massive attacks in all heavily populated areas. For the first 24 hours, radio broadcasts reported tremendous damage and loss of life in all areas, including the total annihilation of most of the earth's population.

For the past 48 hours, there have been no broadcasts.

Fortunately, the people listed below were able to reach a fallout shelter in time to take cover and survived the initial devastation. You must assume that those in the shelter are the only survivors on Earth.

Here is the dilemma:

There are 12 people in the fallout shelter, but there is not enough food, water, and other supplies to keep them alive until the atmosphere is safe. To survive, the people must stay inside the fallout shelter for at least three months. The problem is that if all of them stay in the shelter, all of them will starve to death or die of dehydration. There are supplies enough to only allow 7 of the 12 people to survive.

Your task is to decide, based only on the information given, which people will be allowed to remain, and which people will be required to leave. We will assume that those who are selected to leave will do so peacefully. At issue is the survival of humans. The bottom line is that if human beings are to repopulate the Earth, such re-population will begin with those survivors chosen by you.
